Professional Experience

Tata Consultancy Services (Client: Ericsson) Hyderabad, India

Software Engineer — AI Applications & Backend Engineering Jun 2023 – Present

- Engineered Python automation solutions for Ericsson cloud operations, reducing manual provisioning effort by **60%+** through workflow automation and API integrations.
- Built AI-powered ticket intelligence solutions using **LLMs and Retrieval Augmented Generation (RAG)** to generate contextual summaries and reduce ticket investigation effort by approximately **40%**.
- Designed Agentic AI workflows integrating LLM reasoning, RAG-based retrieval, and automated decision support to improve enterprise incident analysis and resolution.
- Architected backend microservices using **Python, FastAPI, and REST APIs**, supporting enterprise automation and self-service platforms.
- Orchestrated CI/CD pipelines using **Jenkins and Docker** containers, ensuring automated testing and deployment across cloud delivery environments.

AI Projects

AgentForge — Autonomous Multi-Agent AI Orchestration Platform (Live Demo)

Python, FastAPI, React, TypeScript, Google Gemini, Agentic AI, RAG, Event-Driven Architecture

- Built an autonomous LLM-powered AI agent platform enabling task planning, multi-agent collaboration, workflow execution, tool integration, memory management, and knowledge generation.
- Developed AI runtime architecture supporting task planning, agent delegation, workflow execution, reflection-based recovery, and autonomous task completion.
- Designed workflow orchestration supporting conditional execution, tool chaining, and capability-based agent routing.
- Implemented persistent AI memory architecture supporting working memory, session memory, long-term memory, and knowledge promotion.
- Built Mission Control dashboard to monitor agent execution, workflow pipelines, and tool health.

InterviewPilot AI — Adaptive AI Interview Assessment Platform (Live Demo)

Python, FastAPI, React, TypeScript, PostgreSQL, Google Gemini, Multi-Agent Architecture

- Built a Generative AI-powered interview platform that conducts adaptive technical interviews, analyzes resumes/job descriptions, evaluates responses using LLMs, and generates personalized reports.
- Designed a multi-agent architecture with Interviewer, Evaluation, Decision, Memory, and Report agents for dynamic interview workflows.
- Implemented context-aware question generation where interview difficulty and topics adapt based on candidate responses and evaluation results.
- Developed text and voice interview experiences using React and TypeScript with browser speech recognition, silence detection, and conversational interaction.

Technical Skills

Generative AI & Agentic AI: Large Language Models (LLMs), Generative AI, Agentic AI, AI Agents, RAG Pipelines, Prompt Engineering, LLM Application Development, AI Workflow Orchestration, Tool Calling, MCP

AI Frameworks & Platforms: LangChain, LangGraph, Hugging Face Transformers, Embeddings, Vector Databases, FAISS, PyTorch, LLM Evaluation

Programming & Backend: Python, FastAPI, REST APIs, SQL, PostgreSQL, Microservices, System Design, DSA

Frontend Engineering: React, TypeScript, HTML5, CSS3

Cloud & Engineering Tools: AWS, Docker, Jenkins, CI/CD, Git, Linux

Education

Raghu Institute of Technology

Bachelor of Technology

CGPA: 9.3 / 10.0

Visakhapatnam, India

2019 – 2023

Achievements

- Recognized with Star of the Year award and multiple Star of the Quarter/Month recognitions at TCS.
- Ranked among top-performing associates for technical contributions and delivery excellence.
- Solved 300+ LeetCode problems demonstrating strong problem-solving skills.
